

Automatic paper cup forming machine (open cam system)

GI-D paper cup machine is improved based on the normal chain driving type. This machine runs a whole procedure of paper-feeding, cup-fan-wall sealing, oiling, and bottom punching, heating, rolling, rimming, rounding and tripping. It is idea equipment for producing drinking cups, market cups, coffee cups, advertising cups, etc. It is widely used for hot drink and beverage.

Technical Specification

Type:	GI-D
Cup size:	2.5-12oz(if the cup is more than 12oz the machine designed more lager)
Suitable paper material:	150-380g/m2 (single PE-coated paper)
Capacity:	50-70pcs/min
Power source::	380V 50HZ
Total power:	4KW
Weight:	2000kgs
Package size:	2600 x 1350 x 1700 mm
Working Air Source:	Air pressure 0.4Mpa;Air out-put:0.6m3/min

- A: top diameter:
Min 45mm---Max 90mm
- B: bottom diameter
Min 35mm---Max 75mm
- C: total height
Min 30mm---Max 115mm
- D: bottom knurling depth
Min 4mm---Max 12mm
- E: rim diameter
Usually $\Phi 2.5$ --- $\Phi 3$

Advantage and improvement:

Street No- 12, Railway Road, Yadav Nagar, Samaypur

-
1. Use **open cam system** instead of gear box system, more stable running and speed up.

2. Use **automatic lubrication recycle system** instead of oiling by hand to reduce the friction and wear between gears, improve the machine safety and reduce the cost of maintenance.
-

3. Use single plate to instead of three plates, speed increase to 70 per minute.

VS

4. Bottom feeding directly system save more bottom paper.

VS

5. 100 type speed reducer is used instead 80.

VS

The speed reducer and the gear box are very important to the machine. They control the whole machine, if there are some problems with these two parts, then, you have to change the gear box and speed reducer. In this case, the machine should be taken apart, because they are inside the machine. It takes much time, and sometimes you cannot install the machine correctly. So it is necessary to use better gear box and speed reducer.

6. New design knurling wheel is used to guarantee the even pressure and better bottom sealing.

VS

7. Cup folding parts is controlled by three separate cams, and each folding clip can be adjusted by itself.

VS

8. We use manipulator to transfer the cup body instead of falling itself by pipe, It is more stable and accurate under the fast running.

VS

9. Change the Ø25 normal steel shaft to Ø30 imported steel shaft to be strengthened, longer life and more stable.

10. Organ type sucker is used for cup fan sucked to guarantee powerful sucking and more successful. The life is much longer than normal sucker.

VS

Ps for options:

1. Ultrasonic

If you need double PE coated paper cups or paper gram higher 250g/m², we recommend you to use **Ultrasonic** paper cup machine. It can produce single PE coated paper cups and double PE coated paper cups.

2. Collection table:

Collection table can collect cup automatically, no need labor to count the cups one by one

one.
